

# DISCOVER V26.0

## Release Overview

Version 26.0 of DISCOVER focuses on a key challenge: **instantly understanding complex applications in order to evolve them more effectively.**

Through a unique combination of **global visualization (macroscopic views)** and artificial intelligence, DISCOVER transforms systems that are difficult to read into **clear, actionable maps – accessible to everyone**, including business profiles less accustomed to working with source code.

**The result:** faster analyses, more confident decisions, and accelerated modernization projects.

### KEY HIGHLIGHTS

- Instant global view of applications with **macroscopic views**
- **AI-driven** analysis in **natural language**
- Understanding made **accessible to all profiles** (IT & business)
- Automatic mapping of application dependencies
- **Fast and reliable impact analysis**
- Simple web interface, no installation required

### DISCOVER

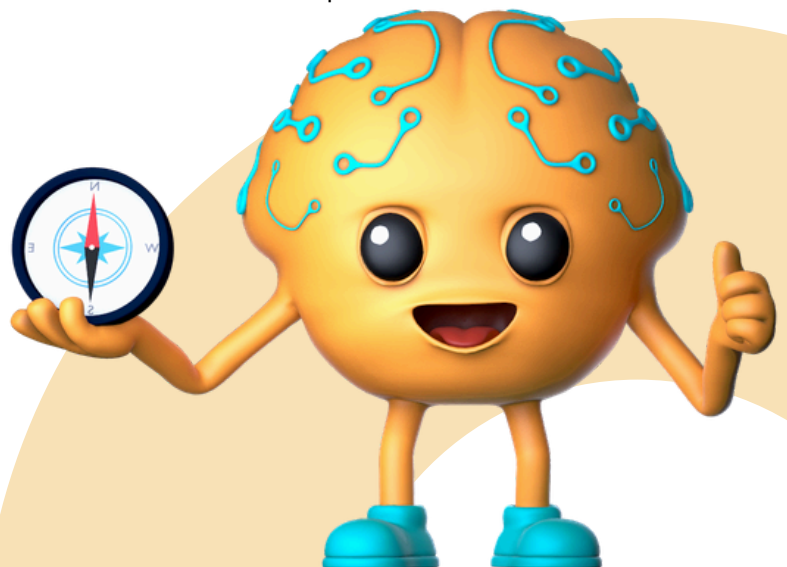

#### Version positioning:

DISCOVER V26.0 reinforces its role as the **reference solution for application understanding**, with a focus on **immediate, high-level readability of complex systems.**

#### Visualize your entire application at a glance

##### Description:

Macroscopic views provide a clear, high-level view of the application architecture and the interactions between components.

### **Customer Benefits:**

- Quickly identify critical areas
- Prioritize modernization projects
- Align technical and business teams around a shared vision

### **Query your application in natural language**

#### **Description:**

Simply ask your questions (e.g. "which programs impact this data?") and DISCOVER automatically generates the relevant analyses and visualizations.

### **Customer Benefits:**

- Immediate access to information
- Less dependency on long-standing experts
- Faster and more intuitive analysis

### **Automatically generate your application maps**

#### **Description:**

DISCOVER builds diagrams in real time (flows, dependencies, interactions) directly from application metadata.

### **Customer Benefits:**

- Rapid understanding of business flows
- Effective support for documentation efforts
- Reduced analysis errors

### **Accelerate your impact analyses**

#### **Description:**

Instantly identify the components affected by any given change.

### **Customer Benefits:**

- Reduced production risk
- More reliable decisions
- Faster modernization

### **Make your applications understandable by everyone**

#### **Description:**

DISCOVER transforms technical complexity into clear, accessible information through a simple web interface.

### **Customer Benefits:**

- Improved collaboration across teams
- Faster onboarding
- Better visibility into the value of your application portfolio

With V26.0, DISCOVER marks a turning point: **you no longer have to endure the complexity of your applications — you take control of it.**

By combining a **global view with AI**, DISCOVER becomes an essential lever for securing and accelerating your transformation projects.
